

In 2007, the Chair in Egyptology of the University of Liège started the project « Ramses. An annotated corpus of Late Egyptian texts ». The project is very substantially supported by the University of Liège for a five year period, starting in October 2008.

A brief description of the database, including its main searching facilities, is available on line (http://www.egyptology.ac.be/docs/Ramses_ICE.pps). This is the PowerPoint presentation we showed in Rhodos during the Xth IAE Congress.

The Chair in Egyptology can offer :

- a 4-year fellowship for a doctoral research (oct. 2008 – sept. 2012)
- a 4-year fellowship for a doctoral research (oct. 2009 – sept. 2013)
- a 2-year fellowship for a post-doc research (oct. 2008 – sept. 2010)
- a 2-year fellowship for a post-doc research (oct. 2010 – sept. 2012)

Candidates must have a good command of Late Egyptian and they must be willing to work in a multidisciplinary team. No special technical knowledge in information technology is required, besides a fair acquaintance with the basic tools (Word, Excel, PowerPoint, Internet).

Doctoral fellows will contribute to the database by encoding and analyzing texts. They will be presented with an original research topic in Late Egyptian linguistics to work with for a PhD.

The first post-doc fellow (2008-2010) will have the responsibility of validating the encoding. He/She will more particularly work on the lexicon with the perspective of making a new dictionary of Late Egyptian. The second post-doc fellow (2010-2012) will take in charge the syntactic analysis.

The financial conditions are :

Doctoral fellowship : 1.666,00 euros netto / month

Post-doctoral fellowship : 2007,00 euros netto / month

Applications must be submitted to

j.winand@ulg.ac.be
